

Our about page is complete finishing up the other tabs (shop and crystals)

Testing tool we utilized:

Selenium and the console

Languages

HTML

Javascript/JQuery

CSS

Bootstrap and Materialize to implement the code

Software documentation hosting options

Public repository- Github pushed and pulled code this way
(<https://github.com/AyannaB/Crystalry>)

-How the website works

Functionality

Components Tabs, Homepage

- About page- Details about Victoria Colon and how the company was started
- Information page- Information on the crystals (In progress)
- Shopping page- The shopper will be able to explore the wide array of products (In progress)
- Data Storage: MySQL/Sequelize which we will link it to the website

Where additional functionality could go in the future?

- Pre-quiz
- Sending emails to people about the products
